

**FOR IMMEDIATE RELEASE**

## **Adaptive Clinical Systems® Partners With OmniComm to Offer EDC Integration Platform**

*Partnership Enables Full Interoperability between OmniComm EDC Suite and Third-Party eClinical Tools Using the Adaptive eClinical Bus®*

Fort Lauderdale, FL, May 24, 2018 - OmniComm Systems, Inc. (OTCQX: OMCM), a leading global provider of clinical data management technology, today announced a partnership with Adaptive Clinical Systems, a company that offers simple, secure, validated and cost-effective solutions for clinical data integration. Under the partnership, the two companies will work together to enable full interoperability between OmniComm’s TrialMaster® electronic data capture (EDC) suite and third-party eClinical tools using the Adaptive eClinical Bus interoperability platform.

The Adaptive eClinical Bus is a cloud-based, hosted service that will integrate with EDC, eCOA, CTMS, Medical Imaging, IRT, analytical/data visualization and other systems to ensure accurate and efficient transfer of clinical data for any study of any complexity.

“We are excited about helping OmniComm clients further leverage their clinical data in the broader eClinical ecosystem. EDC will always be the cornerstone of data-management, but with the addition of our interoperability platform, our mutual customers can now enhance the value of that data to improve quality, reduce transcription errors and more directly leverage any site’s EMR/ EHR data,” said Sina Adibi, CEO of Adaptive Clinical Systems.

Through joint marketing efforts and business development initiatives, the two companies will work together to deliver OmniComm’s EDC technology and services integrated with the Adaptive eClinical Bus.

“Simplifying the clinical trial process and reducing costs for our clients are at the core of our philosophy,” said Stephen Johnson, president and CEO of OmniComm. “Adaptive Clinical Systems offers our clients an interoperable solution with a very open architecture that facilitates the integration of our TrialMaster EDC solution with other leading eClinical technologies in the industry, thereby enabling our clients to analyze their data more efficiently and expeditiously. We look forward to a great partnership.”
